The design life, every number

- Gate G-a wrote THETA_N = 0.951, THETA_M = 0.9967; retina `thresh0.25 centre blur0.8 pool3 hog8 hogcells8x6 unit` (126 numbers); §2's strict rule NOT MET, §11's amended rule met (see the genome file's last line).
- Toy (circle, bar; 2 × 150 moments): Q1 1.000 → PASS.
- At 600: cells 50 sight + 10 words; Q1 0.990 Q2 1.00 Q3 0.990 Q4 0.990; abstain by {'novel': 1, 'noedge': 1, 'ratio': 0}.
- At 900 (after arrival 2): cells 81 + 15 (born novelty 81/15, error 0/0 — the error road FIRED 22 times and every birth was refused as redundant (§11 am. 4); refused by budget 0, by arrival [0, 0, 0]); edges alive 79, born 80, pruned 1; merged cells 0/0; removed for disuse 0.
- Q1 per thing at 900: {"circle": 1.0, "square": 1.0, "triangle": 0.9, "cross": 1.0, "ring": 1.0, "bar": 1.0, "dot": 1.0, "star": 1.0, "arrow": 1.0, "wave": 1.0}; arrival-2 things Q1 0.930 per thing {"moon": 1.0, "house": 0.95, "tree": 0.85, "cup": 0.9, "key": 0.95}.
- Q2 detail (word → the thing of the cell it lit): {"circle": "circle", "square": "square", "triangle": "triangle", "cross": "cross", "ring": "ring", "bar": "bar", "dot": "dot", "star": "star", "arrow": "arrow", "wave": "wave"}.

- Cells per thing (alive, single-thing): {"circle": 2, "square": 4, "triangle": 10, "cross": 7, "ring": 3, "bar": 4, "dot": 2, "star": 2, "arrow": 6, "wave": 10, "moon": 2, "house": 7, "tree": 9, "cup": 8, "key": 5}; multi-thing sight cells 0; answers from multi-word cells 0.
- After the plant (905): Q1 on the first ten 0.990; ledger-corruption plant: hash unchanged True.
- Time: design life 1.69 s; replay identical True.

Twins (§4) — each blind to one thing

- **T-shuffle-5**: Q1 0.075 (abstain {'novel': 1, 'noedge': 1, 'ratio': 58}) · Q2 0.00 · Q3 0.505 · Q4 0.385 · cells 103+15 (error births 35/0, redundant refused 59) · edges alive 422 born 470 pruned 37 (7.9 %) · merged 11/0 · refused budget 0 frozen 0 · 1.41 s
- **T-shuffle-6**: Q1 0.010 (abstain {'novel': 1, 'noedge': 1, 'ratio': 76}) · Q2 0.20 · Q3 0.475 · Q4 0.285 · cells 111+15 (error births 39/0, redundant refused 61) · edges alive 432 born 477 pruned 36 (7.5 %) · merged 8/0 · refused budget 0 frozen 0 · 1.43 s
- **T-shuffle-7**: Q1 0.130 (abstain {'novel': 1, 'noedge': 1, 'ratio': 54}) · Q2 0.00 · Q3 0.535 · Q4 0.405 · cells 98+15 (error births 29/0, redundant refused 64) · edges alive 395 born 440 pruned 35 (8.0 %) · merged 10/0 · refused budget 0 frozen 0 · 1.4 s
- **T-frozen**: Q1 0.245 (abstain {'novel': 151, 'noedge': 0, 'ratio': 0}) · Q2 0.50 · Q3 0.620 · Q4 0.245 · cells 5+5 (error births 0/0, redundant refused 0) · edges alive 5 born 5 pruned 0 (0.0 %) · merged 0/0 · refused budget 0 frozen 1347 · 0.96 s
- **T-nowire**: Q1 0.000 (abstain {'novel': 1, 'noedge': 199, 'ratio': 0}) · Q2 0.00 · Q3 0.500 · Q4 0.000 · cells 81+15 (error births 0/0, redundant refused 0) · edges alive 0 born 0 pruned 0 (0.0 %) · merged 0/0 · refused budget 0 frozen 0 · 1.17 s
- **five-thing life** (600 moments, 120/thing): cells born 29 vs the ten-thing life's 50 at 600; Q1 1.000.

The design genome's composite 0.992 ranks 1 of 21; the best random genome is seed 7 at 0.986.

What did nothing in the design life, and why

- Four genes had no measurable work: error births 0 (the road fired 22 times, every birth refused as redundant), merges 0 (THETA_M 0.9967 was never met between two winners with the same answer), pruned 1 of 80 edges, scale 0. This follows from THETA_N (0.951) sitting ABOVE the between-thing maximum (gate G-a, §11 amendment 2): no cross-thing edge is ever born, so nothing is wrong, redundant or weak. In T-shuffle-5, where the pairings are random, 470 edges were born and 37 pruned (7.9 %) — that number says whether the PRUNE gene works at all when there is something to prune.
- The same threshold surfaced twice more. The plant: «zog» shown 5 times birthed 4 cells, and 10 of 20 held-out zog renderings resonated with none of them (at THETA_N = the within-thing MEDIAN, half of same-thing renderings do not resonate with a given cell) — the plant reads 0.50 against a majority bar. Q5: the spiral abstains at exactly 0.80, its bar, with 4 of 20 read as «circle»; the spiral was never in gate G-a's ten-thing measurement, so the threshold carries no guarantee for a never-shown thing — one more answered spiral fails (vi) a second way.

What this verdict does and does not say

- The truth never entered the organism: `genome/machinery.py` imports neither `world` nor `questions` and carries no label field; the ledger is the runner's, built from the stream (clause 12; the hash check proves only that the runner did not touch the organism).
- SCALE is untested here (0 events in 905 moments). §2's strict gate rule was not met by any fixed front; §11's amended rule was, at the price of several cells per thing — the cells-per-thing line above is that price, measured.
- No sentences, no reasoning, no reward, no sleep, no evolution (§6). Rung 1 is his pictures through the folder door; rung 2 a lineage, only after rung 1.
